Community Medicine:

Over the period; medical science has evolved from the supernatural theory to a modern science. The subject Preventive & Social Medicine (PSM) is the relatively newer discipline conceptualized in the early twentieth century. Even after its conception, it has kept on growing and changed. It started as only preventive medicine which was to be applied to healthy people, customarily by actions affecting large population, with primary objective to disease prevention and health promotion.

Later on a social medicine which emphasizes the strong relationships between medicine and social science, and deals with more of study of epidemiology and medical care of society came on the surface.

The true measure of success
is how many times you can
bounce back from failure.
